Report on Cliniassure ^{DATE} ^{PAGE}
→ II nd YEAR (BSc-BE)
→ PRITHVIKAR

Cliniassure a clinical research training, consulting and mentorship firm. It was a wonderful experience of us working as student interns and learned a lot of new aspects, of pharma and biotech, life sciences. It was the best in mentorship to clinical aspirants and like us and support us for us with end-to-end process to kick start our career.

Cliniassure team had the commitment to provide the education via learning management system including many new concepts about linkedin and writing an official mail etc. They also conducted weekly tests for us to ensure that we get the concepts right.

There were industry experts who were giving and sharing their valuable experience with us. We learned many new concepts of central laboratory, local laboratory, ICH and GCP guidelines.

These were the new concepts which will be useful for our future performance.

We also learned how to ~~thank you~~ thank you.

collect data base and store it. About medical coding, what is high and low level term among them, about multi-regional clinical trials and safety data collection.

The teachers were friendly and had a good interacting sessions and explained us the concepts in detail. It was in budget programme and well detailed one.

Thank you.

INTERNSHIP REPORT

PREETHAM.A.RAO

RAMAIAH COLLEGE OF ARTS, SCIENCE AND COMMERCE

INTERNSHIP- Clinical Research, Clinical Data Management and eTMF

CONDUCTED BY- CLINIASSURE

TIME PERIOD- 16TH September 2021 to 30TH
October 2021,(45 DAYS)

TOPICS :-

- 1-INDUSTRIAL TRAINING
- 2-CLINICAL RESEARCH
- 3-CLINICAL DATA MANAGEMENT
- 4-PHARMACOVIGILANCE
- 5-DOCUMENTARY MANAGEMENT
- 6-PERSONALITY DEVELOPMENT

TRAINING PERIOD

The entire subject and the concept gave idea to many students,This kind of experience was a first time.The successful completion of this internship mark the beginning of an ever - going learning experience of converting ideas and concepts into real life, practical

system. This internship was a quite a learning experience for me at each and every

step. At the same time it has given me confidence to work in professional setup.New techniques, new management information has been passed on to us,which would be a great useful methods in future.

INDUSTRIAL TRAINING

Acknowledgement It is always a pleasure to remind the fine people in the Internship program for their sincere guidance I received to uphold my practical as well as theoretical skills in further.

Firstly I would like to thank RAKESH RANJAN (Director,CLINIASSURE LLP) for meticulously planning academic curriculum in such a way that students are not only academically sound but also industry ready by including such industrial training patterns. I would also like to thanks PRASANNA KUMAR S G (HOD BIOCHEMISTRY MSRCASC) for the positive attitude he showed for my work, always allowing me to question him and giving prompt replies for my uncertainties in all the fields including educational, social and managerial work.

The purpose of this internship has given a idea to learn things which were not known to us. It would be a great pleasure if we would work for a good industry using the techniques learned during the internship training.

16th September to 30th September Internship conducted where new ideas, technology, events, innovation many creation were thought including time management . As I was not aware of new research ideas and technologies going on in the society. This internship helped me out to gain knowledge and ideas.

CLINICAL RESEARCH

In this we learnt about the Research in which people, or data or samples of tissue from people, are studied to understand health and disease. Clinical research helps find new and better ways to detect, diagnose, treat, and prevent disease. Types of clinical research include clinical trials, which test new treatments for a disease, and natural history studies, which collect health information to understand how a disease develops and progresses over time.

Clinical trials may be carried out at various stages or phases and include trials on healthy humans, trials on patients with a disease, and studies conducted after the launch of a new drug to monitor safety and side effects.

a clinical research run clinical trials to test drugs for their effectiveness, risks and benefits to ensure that they are safe to allow on to the market. You'll work on new and existing drugs and will usually be employed by either a pharmaceutical company or a contract research organisation (CRO), which works on behalf of pharmaceutical companies.

CLINICAL DATA MANAGEMENT

The Clinical Data Management (CDM) process is like clinical trials, which required a fully planned and integrated scheme from the beginning to the end. The outcome of the process is considered first and the whole process of designing the system is made by considering the final deliverable in mind. The main purpose of an effective clinical data management process is to deliver a valid, error free and statistically relevant database.

The clinical data management process starts early, even before the study protocol is finalized. The first step in CDM is the review and the finalization of the documents of the study, which gives an idea about how to design a database which will be later used for data collection. The CDM personnel responsible for database designing will review aspects of the protocol like scheduled visits, the basic demographic data of the patient which needs to be entered, dose calculations etc.

Based on all the above, a Data Management Plan or the DMP is developed which serves as a very essential document to support the team during conflicts and problems arising during the process. The DMP usually consists of database entry and design, data tracking methods and guidelines, SAE reporting and narration, SAE reconciliation, discrepancy management, quality control and final database locking guidelines. After the DMP has been developed, comes the designing of the database. A database is a software application which helps the user to carry out various functions during the process of CDM. An important aspect of data base designing is to validate the system which ensures data security and accuracy.

PHARMACOVIGILANCE

Medicines and vaccines have transformed the prevention and treatment of diseases. In addition to their benefits, medicinal products may also have side effects, some of which may be undesirable and / or unexpected. Pharmacovigilance is the science and activities relating to the detection, assessment, understanding and prevention of adverse effects or any other medicine/vaccine related problem.

All medicines and vaccines undergo rigorous testing for safety and efficacy through clinical trials before they are authorized for use. However, the clinical trial process involves studying these products in a relatively small number of selected individuals for a short period of time. Certain side effects may only emerge once these products have been used by a heterogenous population, including people with other concurrent diseases, and over a long period of time.

Pharmacovigilance can be defined as the science and activities concerned with the detection, assessment, understanding and prevention of adverse reactions to medicines (i.e. adverse drug reactions or ADRs). The ultimate objective of this activity is to improve the safe and rational use of medicines, thereby improving patient care and public health.

The {Drug Regulatory Authority} defines an Adverse Drug Reactions (ADR) or adverse reaction as a response to a medicine used in humans or animals, which is noxious and unintended, including lack of efficacy, and which occurs at any dosage and can also result from overdose, misuse or abuse of a medicine.

DOCUMENTARY MANAGEMENT

Companies conducting clinical research studies are focused on establishing not only the safety and efficacy of their investigational products but also on the integrity and quality of the data they collect in compliance with research regulations. Clinical quality groups have a need for tools that will support them with the organizational processes and conditions under which clinical studies can be planned, performed, monitored, recorded, archived and reported.

The MasterControl Clinical Quality (GCP) JumpStart™ is a Web-based system that provides a complete document management solution for all of an organization's clinical quality document needs.

This configuration is designed for pharmaceutical, biologics and/or clinical research organization (CROs) looking to manage clinical quality documentation outlining procedures, methods, roles and responsibilities for all activities executed during clinical research studies, as well as procedures for pre- and post-study activities.

The importance of clinical documentation

It captures patient care from admission to discharge, including diagnoses, treatment and resources used during their care. When the documentation is complete, detailed, and accurate, it prevents ambiguity, and improves communication between healthcare providers

PERSONALITY DEVELOPMENT

Personality development encompasses the dynamic construction and deconstruction of integrative characteristics that distinguish an individual in terms of interpersonal behavioral traits.[1] Personality development is ever-changing and subject to contextual factors and life-altering experiences. Personality development is also dimensional in description and subjective in nature.[2] That is, personality development can be seen as a continuum varying in degrees of intensity and change. It is subjective in nature because its conceptualization is rooted in social norms of expected behavior, self-expression, and personal growth.

A large new study published in Nature Human Behavior, however, provides evidence for the existence of at least four personality types: average, reserved, self-centered and role model.

If people successfully deal with the conflict, they emerge from the stage with psychological strengths that will serve them well for the rest of their lives.³ If they fail to deal effectively with these conflicts, they may not develop the essential skills needed for a strong sense of self.

CONCLUSION

This internship has been an excellent and rewarding experience. I can conclude that there have been a lot I've learnt from this internship. Needless to say, the technical aspects of the task I've done are not flawless and could be improved provided enough time. As someone with no prior experience, whatsoever I believe my time spent in internship was well worth it and contributed to finding an acceptable solution to doubt running in our mind. Two main things that I've learned the importance of are time-management skills and self-motivation.

THANKS TO THE ALL THE FACULTY who made us understand the value of our new subject, every session was a time to learn new things. Clarification was a must to us in a short period of time.

1. The branch of health care science which intends to check ^{determine} for the safety of a drug / devices or diagnostic method used against a particular disease.

2. Clinical Research → Set of regimes used to check the effectiveness of a particular device / drug / diagnosis on an organism.

Clinical Trial → Research that studies the effectiveness of a drug / device / method on human outcomes.

3. It is a condition of being protected from something

or

4. Maximum ability of a drug or treatment to produce a result regardless of dosage.

5. * Safety leads to better patient protection and has potential to save development costs.

* It is important in order to protect rights, safety and well-being of participating persons.

6. * Age

* Gender

* Medical History

* Current Health Status

These are some of the important criteria to be met for before clinical trial participation.

7. The participants in clinical trials do so freely with their own will.

* Volunteers may also have a common health condition such as kidney disease, High BP or Cancer of same type.

8.

8. It is a document that describes the method of conduction of the trial.

It is dosage of a
Eg: → To evaluate a formulation of a drug.

* The Set of rules to follow during a trial.

9. ~~Not~~, ~~not~~ Everyone can participate in the clinical trials.
The Set of criteria may differ from trial to trial, but the general criteria may be as follows:

(i) Age
(ii) Gender
(iii) Having a disease / health condition being studied
⇒ Patient Volunteers.

(iv) Healthy Volunteers,

⇒ The person has all rights to leave the trial at any moment he/she desires.

* Inclusion → These may be the criteria which allows the volunteers to participate in the trial

Eg: → Age, ^{Stable} Diseases, and other features which enables the research.

* Exclusion: → This criteria would limit the person's participation

Eg: → Comorbidity in research; Sleep apnea; etc.

10. LinkedIn is an online professional networking site which enables a person to be hired and a large stage for a company to search for an eligible employee for a job. During the pandemic it's been really hard for many people to find jobs due to the lack of person-to-person interactions and lack of interviews. Now, LinkedIn shall play a very important role to enable people to gear a livelihood during such times as it connects the employer & the employee online with such a wide network that shall help both of them as it becomes easier to go on with the employment. As a student it allows me to connect with my interests and to learn on ground about how a particular job is done as also helps me get connected to various companies which may hire me for my skill due its wide networking ability. It also gives me choices so that I choose my career path with extreme diligence and cautiously and with better knowledge.

11. CV is a summary of all the personal, professional and academic achievements of a person that entice him/her to get a job opportunity

Eg: *

- * Communication
- * Work experience
- * Technical skills etc.

→ These shall enable the employer to know the applicant better and these criteria shall enable the applicant more eligible for the job.

12. It is a resume with keywords that the ATS is programmed to look for. Eg: Relevant Word Usage

- Degree & abbreviations spelled out
- Experiences to target the career target

13. It makes it easier to know the eligibility of the applicant.

Eg: Degrees and abbreviations and experiences causes lesser confusions and more serious chances to the hiring of person
